FDB AnalyseR_X®

Deliver medicines optimisation at scale

Helping primary care teams identify, action and manage medicines optimisation opportunities, all in one place.

'AnalyseRx is a fabulous tool that will make a big impact for the practice team - anyone who says otherwise has not used it.'

Melanie, Lead Pharmacist

Fully integrated within the GP clinical system, AnalyseRx is a proactive medicines optimisation solution that provides total visibility for Integrated Care Board (ICB), Primary Care Network (PCN) and practice teams over patient searches and follow-up actions across their population. This frees up more time for patient care and enables better clinical outcomes at every level of your organisation.

With AnalyseRx, primary care teams can quickly gain insight across their patient population and harness this data to determine their priorities and coordinate and manage every step in the medicines optimisation process.

Unlike many other tools available, AnalyseRx automatically refreshes patient data every single day, enabling teams to spend more time focusing on their patients and less time updating spreadsheets. Plus, our **sophisticated reporting dashboards** can help you understand how your organisation is performing, making it easier than ever to track progress against projects or schemes.

ABOUT US

FDB (First Databank) creates and delivers the world's most powerful drug knowledge that ignites, inspires, and illuminates critical medication decisions. We collaborate with our partners to help improve patient safety, operational efficiency, and health outcomes.

Our solutions drive healthcare information systems that serve the majority of hospitals, GP practices, pharmacies and many other areas of healthcare and are used by thousands of clinicians every day.

FDB AnalyseRx

Empowering transformation in primary care

Manage **every step** in the medicines optimisation process

A transformational way of working

01 STEP 1
Identify & Prioritise

02 STEP 2
Action & Collaborate

03 STEP 3
Track & Evaluate

Fully integrated into the GP clinical system to make your lives easier

All patient searches and follow-up actions can be quickly completed by accessing AnalyseRx within your GP clinical system, providing shared visibility and removing data silos that exist when using several systems to perform similar work.

Direct clinical system integration also means dynamic patient data at your fingertips and no more weekly data uploads or exports to spreadsheets. The data you need is automatically there and refreshed daily, which means you can be as responsive as possible when actioning changes.

Get more done by enabling smarter, collaborative working

With AnalyseRx you can ensure the right people are delivering the right care at the right time for that patient. You can go beyond simply identifying opportunities for medicines optimisation and actually action them seamlessly, as a team. You can initiate, delegate and manage opportunities with your colleagues, knowing you've got real-time visibility on what your team is working on.
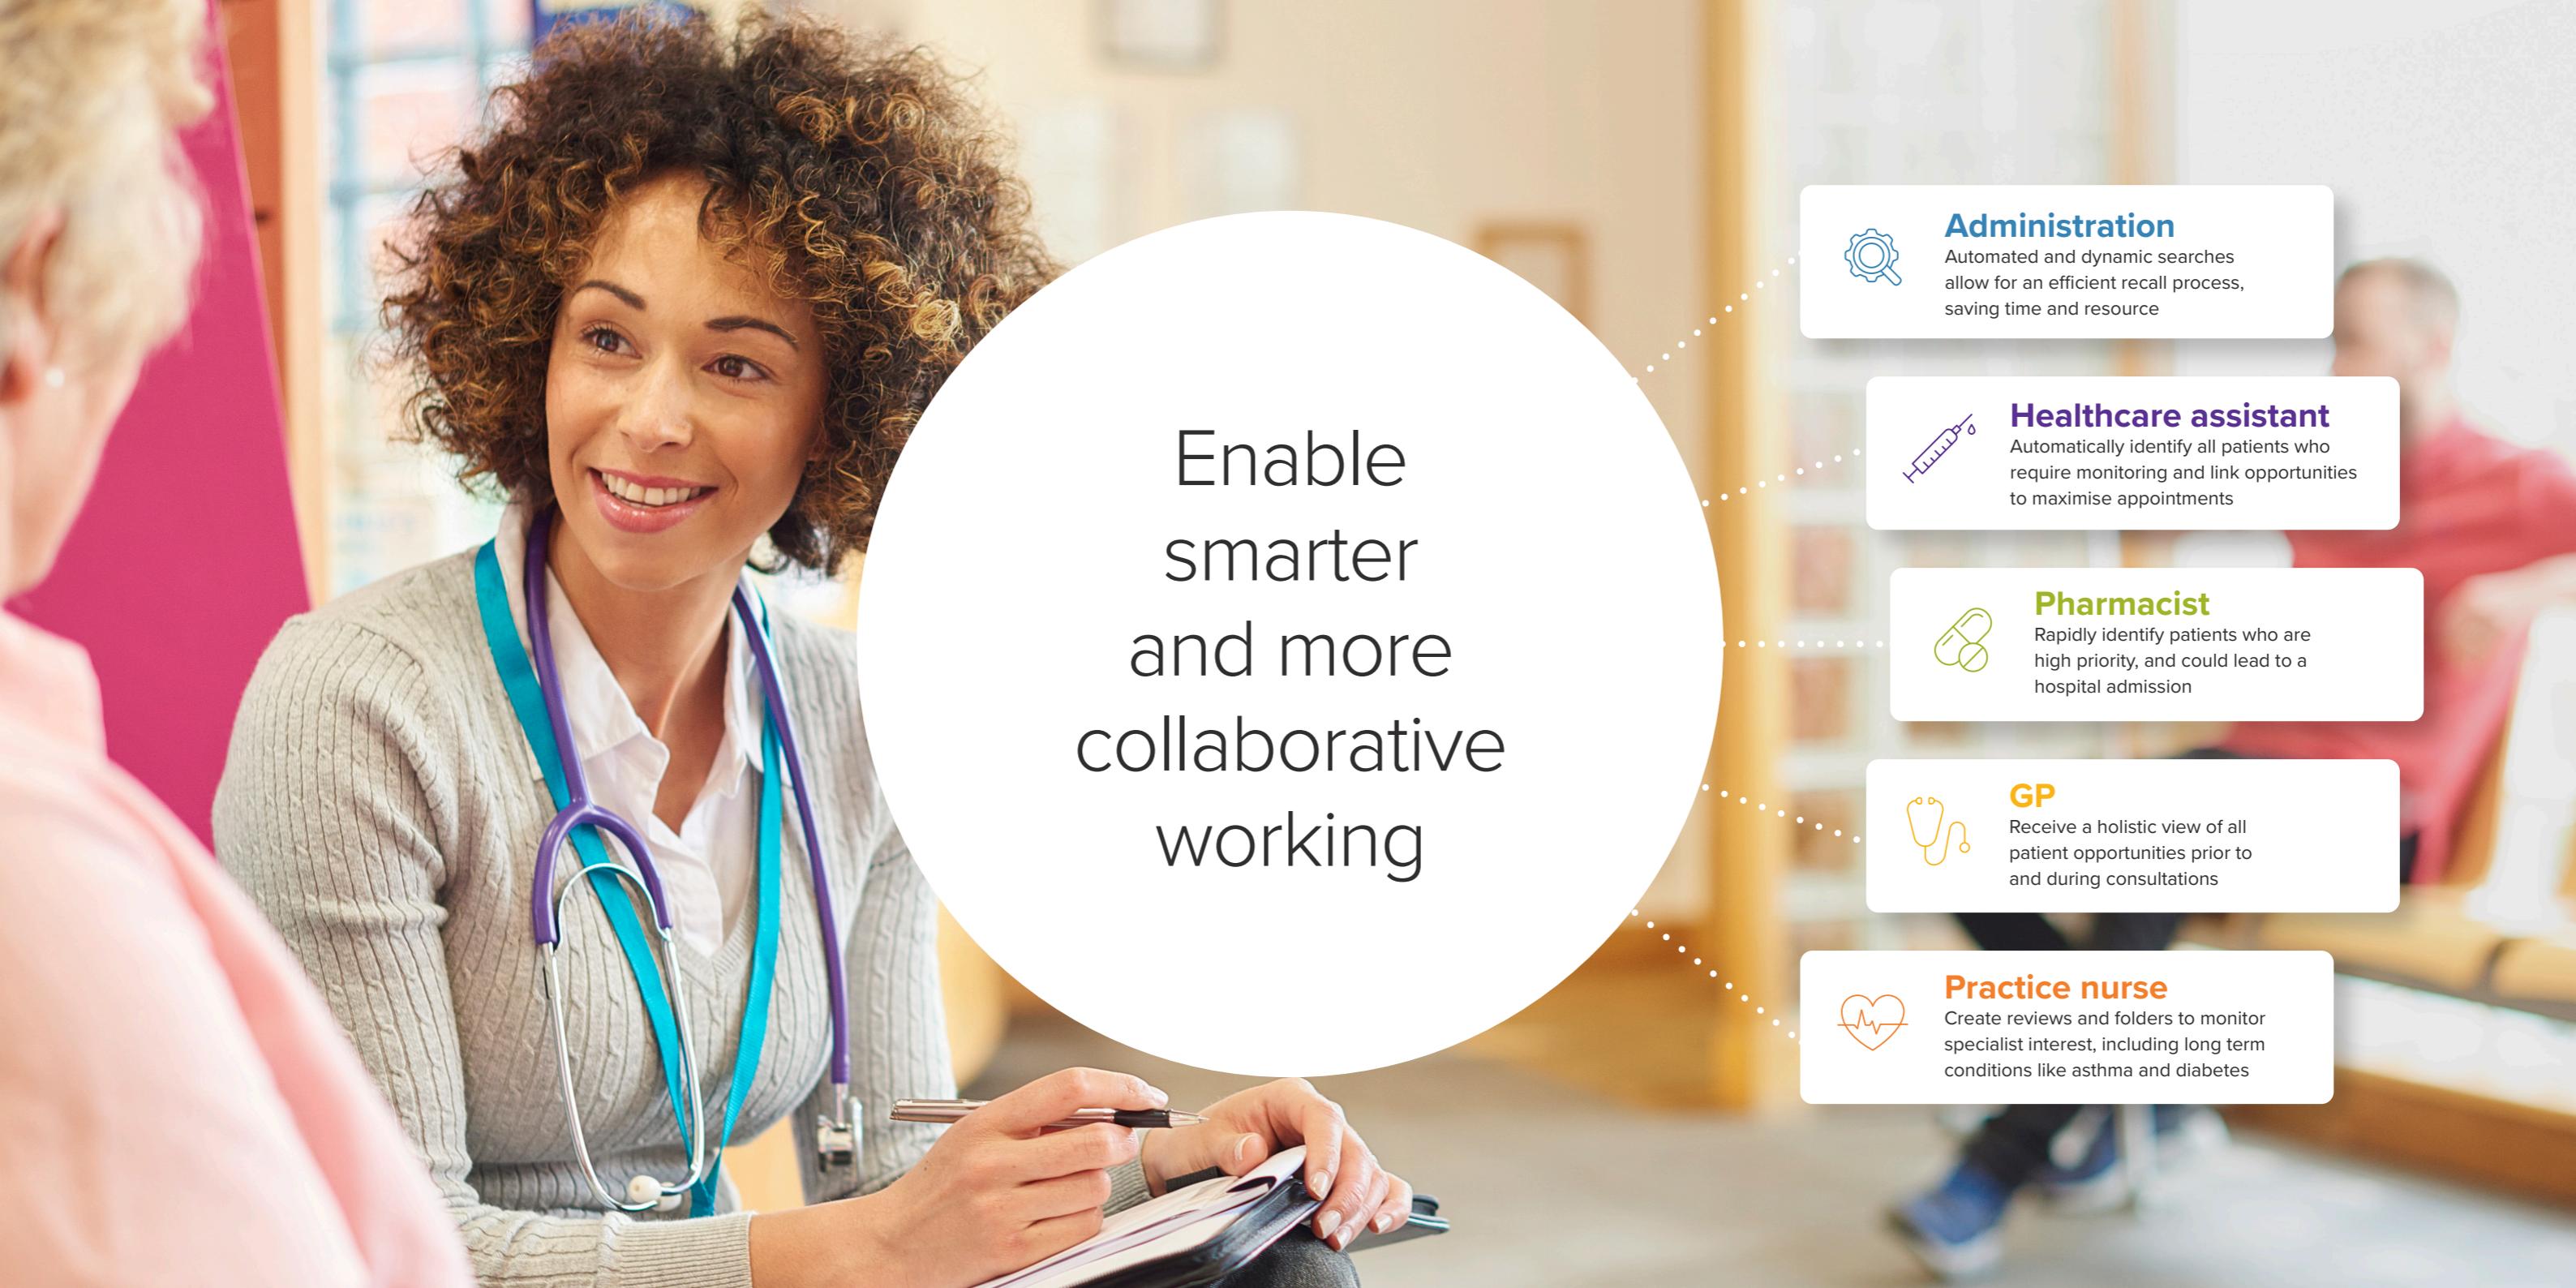

It also means that duplication of work, reworking and revisiting patients' needs can be a thing of the past. And most importantly, improving productivity means more time with patients, safer, better-quality care and lower costs.

Sophisticated reporting and organisational insights to drive decision-making

Our powerful reporting dashboards can help you to understand how your organisation is performing against key goals, check progress across the team and quickly identify new areas for improvement specific to your organisation.

Whether you're looking to align working with local Medicines Optimisation Incentive Schemes or Quality and Outcomes Framework (QOF) indicators, the breadth of reporting available means you can track and monitor the progress of individual opportunities to organisation-wide objectives. What's more, our reporting and insights data can be used at multiple levels in a geographic area, from GP practice up to PCN or even ICB.

FDB AnalyseRx

FDB AnalyseRx

Enable smarter and more collaborative working

Administration
Automated and dynamic searches allow for an efficient recall process, saving time and resource

Healthcare assistant
Automatically identify all patients who require monitoring and link opportunities to maximise appointments

Pharmacist
Rapidly identify patients who are high priority, and could lead to a hospital admission

GP
Receive a holistic view of all patient opportunities prior to and during consultations

Practice nurse
Create reviews and folders to monitor specialist interest, including long term conditions like asthma and diabetes

Deliver and provide evidence of real value

Maximise patient safety

Reduce risk by quickly and accurately identifying and prioritising high-risk and hard-to-reach patients before seamlessly coordinating with colleagues on next steps.

Increase time to care

Coordinate with your colleagues in real-time on patient lists and next steps, streamlining work processes and improving efficiency across the entire primary care team.

Deliver on NHS priorities

Maximise NHS Incentive schemes and payments with delivery against DES requirements and indicators like IIF and QOF.

Reduce costs

Reduce ineffective medicines, improve formulary adherence and prescribing budget management.

→ **Patient data is automatically refreshed daily**, which means no more weekly data uploads or exporting of spreadsheets

→ **Unparalleled breadth and depth** of clinical content coverage aligned with national objectives, including incentive workstreams, disease areas and structured medication reviews

→ **Over 600 clinical content algorithms** authored and updated by our clinical experts, all informed by nationally recognised, evidence-based guidance

→ **Powerful reporting dashboards** to help you understand how your organisation is performing against key goals

→ **Fully integrated into the clinical system**, avoiding the need for multiple solutions and time-consuming manual downloads

→ **A wide range of filters** to identify and prioritise patients with the most urgent needs, giving primary care teams a natural to-do list and avoiding the need for manual searches

→ **Shared visibility of data** across practices, PCNs and ICBs improves communication and coordination across organisations

→ **The easy-to-use sidebar function** means users can carry out opportunistic reviews within the clinical system when they're not viewing their full AnalyseRx dashboard, offering a seamless user experience

FDB AnalyseRx

'The savings opportunities have allowed us to make simple switches that had a big saving impact for the practice.'

Noor, Practice Pharmacist

'This has helped to build a robust daily process when it comes to DOAC dose monitoring in patients with impaired renal function. It improves patient safety by bringing high-priority patients to my attention straight away and reduces the risk of missing an inappropriate dose.'

Katherine, Pharmacy Technician

'I love using AnalyseRx for diabetes management – I can see at a glance which patients are overdue their monitoring and not meeting their treatment targets and then use AnalyseRx to send a task for reception to book them an appointment.'

Kathryn, Practice and PCN Pharmacist

'AnalyseRx is a simple, easy to use system that is built into our EMIS clinical system. I particularly love the ability to filter and create a comprehensive search at the few clicks of a button.'

Jennie, Pharmacy Technician
