

CASE STUDY: CLEVELAND CLINIC ABU DHABI CASE STUDY

Mubadala Healthcare, in-conjunction with Cleveland Clinic, is currently building a brand new hospital in Abu Dhabi, UAE.

The new 364 bed (expandable to 490) hospital will open in 2013 providing world-class medical care to the local community. The hospital will have a number of specialist departments and will be staffed by western trained and board certified (or equivalent) physicians.

First Databank has a long association with Cleveland Clinic and is proud to have been chosen to provide medicines information and clinical decision support for the new facility in Abu Dhabi.

First Databank's drug information and decision support will be accessed through Epic's electronic medical records information system, which will be used across all departments in the hospital.

To support the emerging market in the Middle East First Databank has created a new product, Middle East Data Knowledge, to meet the requirements of Cleveland Clinic and the wider market. To this end, both organisations have entered into a long-term agreement.

The new product will feature drugs that are registered by the Health Authority of Abu Dhabi, known as HAAD. It will also give other features to provide Cleveland Clinic's healthcare professionals with full clinical decision support. First Databank will support this initiative in terms of medicines management by providing drug data and decision support on an ongoing basis.

“We are pleased to be working collaboratively with Cleveland Clinic Abu Dhabi to ensure that Middle East Drug Knowledge meets the needs of the hospital in providing the world-class services required”.

DARREN NICHOLS

Managing Director of First Databank
